

Nobles Soil and Water Conservation District

Feedlot Programs

The Nobles SWCD has several programs available for technical and financial assistance in regards to feedlot improvement practices. The Nobles SWCD is not an enforcement agency requiring landowners to comply with Federal, State and Local regulations. The Nobles SWCD is available to provide landowners a starting point to find and repair feedlot water quality problems and concerns. Keep in mind that many feedlot repairs can be very low cost or eligible for several State and Federal cost-share funding.

The Nobles SWCD has been involved in several feedlot improvement projects in that past including:

- **Roof Structures.** Constructed to prevent feedlot runoff.
- **Lagoon and Concrete pit construction.** Constructed to contain feedlot runoff.
- **Clean water diversions.** Used to divert clean water around feedlots.
- **Relocations.** Funding is available to relocate lots and structures on another site in order to improve water quality.

If you feel you have a water quality issue or would simply like to improve your operation while benefiting local water issues, contact the Nobles SWCD office at 507-376-9150.
